

Public is not served because too much garbage fills limited air waves! Satellite & Cable have space to move garbage to. Congress is enabling through the FCC corporations to censor--violating first amendment. Congress must change rules to charge licensee fee to pay to require 2/3 of content to be signed as verification that viewpoints (frame of reference) of local citizens (Vietnamese, Hispanic, Labor etc) are expressed on local airwaves including controversy as often as found in the community. Digital transmissions should be multilingual so the whole community can share in same thoughts. Cable casts must include requested programming to reduce need for translators. More detail than title must be available on each program so viewers, listeners can select & budget their time. Content must be timely to enable viewers - listeners to influence government and other groups. Large tax should encourage TV sets to have simple switch to go from antenna to cable. Unserved viewers listeners should be counted & large counts should cause license to be revoked. When public as now is not being served licenses should be pulled to make space for broadcasters who will serve the community! No age group, ethnic group, racial group, sexual group etc should be omitted from being subjects or having their needs met! Currently PSA are only provided to well funded groups as business incentives. Expensive programming should not consume undue amounts of money from other programming. I have served over 200 organizations with 800 field broadcast hours in 4 years which is more than all the other commercial media on the central coast excluding council meetings. As I said in Monterey the commercial media should wear bags over their head in shame for not serving the community.
